Mixed question types

1 Question 1

- Explain why K reacts w/ diwte acids.
- : Kreacts w/ water.
 Range of metal reacting w/ acid > water
 : Kreacts w/ dilute acids

2 Question 2

- Explain which is more reactive, K or Ag.
- K To produce metal oxide, K doesn't require heat while Ag needs strong heating.

3 Question 3

- According to the following table, arrange reactivities of W, X, Y, Z ascendingly.

	lw	χ	Υ	Z
+CUSO4 caq>	colouriess gas bubbles	reddish brown solid deposits	no 0.C.	no O.C.
	W20	XO	Y20	20
hearting	no O.C.	no O.C.	Silvery solid deposits	no O.C.

- Y, Z, X, W
- (X,Y,Z)<W Wreacts w/ water, others do not
- (Y,Z) < XX is a stronger reducing agent than Cu, others are not
- Y < Z Y_2O decomposes and gives Y upon heating, ZO does not
