## Dative covalent bonds

## 1 What are they?

- type of covalent bond (sharing of e-)
- difference w/ normal CBs

Normal 两颗atom 也会提供电子 两夫妇-起灵楼 dative 一颗atom 提供电子, 两颗atom 共用 老公付钱, 但两夫妇-起住

## 2 Formation

- There are <2> lone pair of e in <0> atom from <H20> molecule.
- There is <no> outermost shell e in <H + ion> -> vacant site
- A lone pair of e-from <0> atom is donated to the vacant site in <H+ ion>.

## 3 Examples

 $H_{3}O^{+}$   $H_{2}O + H^{+} \longrightarrow H_{3}O^{+}$   $H_{3}OH + [H]^{+} \longrightarrow [H_{3}OH]^{+}$   $[H_{3}OH]^{+}$ 

CO - CÉO

 $O_{3} \longrightarrow O_{2} + O \rightarrow O_{3}$   $O_{2} + O \rightarrow O_{3}$   $O = O \rightarrow O$ 

 $N_{2}O$   $N_{2} + O \rightarrow N_{2}O$   $N = N \rightarrow O$   $N = N \rightarrow O$
