Diluting conc. acids

1 Qualitatively

- pour the acid to distilled water Slowly, <u>stir the Solution</u> → → temperature (酸加水,慢慢嚟,摘摘裏)
- 为何不把水加至acid 里?
 - ① water is less dense than acid (比较Mr)
 - + Gwater floats on top of conc. acid
 - Deprocess is highly exothermic (= gives out a lot of heat)
 - = Glocal heating effect
 - > water splashes out w/conc. acid > highly corrosive

2 Quantitavely

- 参见 Prepare standard solutions — 2. Diluting method
